
a
CDDM, N = 1,000
3BFF, N = 1,000
silent
low-active
active
no silent unit
in any 3BFF network
time (τ)
b
CDDM, N = 1,000
3BFF, N = 1,000
incoming-weight gradient
(95th percentile = 1)
share of steps with x_i>0
active
low-active
silent
reach threshold
c
CDDM, N = 1,000
3BFF, N = 1,000
% of the class active later
+500 iterations
+5,500 iterations
active
reached
not reached
silent
low-active
d
ReLU, CDDM, N = 1,000
tanh, CDDM, N = 1,000
units
untrained
trained
threshold
gradient on x_i per unit of error
(untrained 95th percentile = 1)
e
N = 1,000
N = 4,000
% of S_0 active at the floor crossing
fail threshold
pass threshold
median S_0
old 809
young 709
old 3,648
young 3,456
f
N = 1,000
N = 4,000
active units at the floor crossing
old, at the start
pass threshold
