
a
active units
every unit active
3BFF, b = 0.48
CDDM, b = 0.44
DMTS, b = 0.55
network size N
b
active units (% of N)
50%
10%
network size N
c
constant fraction
exponent b
1.05×
1.10×
1.20×
margin over the loss floor
d
3BFF, N = 1,000
CDDM, N = 1,000
DMTS, N = 1,000
loss / initial loss
inactive units
training iteration
e
N = 500
N = 1,000
N = 2,000
N = 4,000
trained to 300,000
decrease in the number of active units per 100,000 iterations
decrease of 5 active units
flat loss
loss change after iteration 150,000 (% per 100,000 iterations)
