
control networks
rate penalty
noisy synapses
rescaling
prune-and-duplicate
read-out dropout
R^2 from weights inside a loss burst
a
N = 1,000; median over networks
active units (of 1,000)
iteration
b
N = 1,000; 75,000 iterations
held-out R^2
rate penalty: count swings during training (d)
active units (of 1,000)
c
floor crossing
75,000 iterations
rate penalty: no floor crossing at $N \leq$ 1,000
fold change
R^2 change
network size N
d
rate penalty alone, N = 1,000, three networks
noisy loss
active units
control networks at their floor crossing
iteration
e
N = 1,000
equal cost
N = 1,000
N = 4,000
R^2, k added units removed
R^2, k random active units removed
held-out R^2
units removed at random (% of N)
f
floor crossing
75,000 iterations
off scale
active units
held-out R^2
participation ratio
