
a
active units
every unit active
3BFF ∝ N^0.48
CDDM ∝ N^0.44
DMTS ∝ N^0.55
network size N
b
active units (% of N)
50%
10%
network size N
c
constant share
exponent b (active ∝ N^b)
read-out margin over the floor
d
3BFF, N = 1,000
CDDM, N = 1,000
DMTS, N = 1,000
loss / start
inactive units
training iteration
e
N = 500
N = 1,000
N = 2,000
N = 4,000
trained to 300k
loss flat
units made inactive per 100k iterations
loss change after 150k (% per 100k)
